

General Overview: Engineering

The Engineering sector covers a wide spectrum of manufacturing processes and Regina Industries is well served to meet the needs of clients within this sector.

Spanning over its 60 year plus history, Regina Industries has produced bespoke plastic components for many companies in the Engineering sector.

We can produce components from a wide array of Engineering Polymers including but not limited to; **Nylons, Acetal, Polycarbonate, ABS, TPE/TPR, PPS, Flexible PVC etc.**

Some of the parts we have manufactured include but not limited to:

- Housing Mouldings
- Over moulded components for Mechanical Meters
- Water pump components
Textile Machinery components
- Filter Press mouldings (Neck Rings)

Capabilities

We have the capabilities to **injection mould up to 500g in weight** and can offer bespoke guidance to the client's specification for example using UV stabilisers or Flame Retardant additives to conform to industry requirements.
