

General Overview: Electronics

Plastics play an important role in the design to manufacture process due to its non conductive properties.

Materials can be specified for a crossover of applications from insulating wiring to household electrical goods.

Regina Industries experience has helped a number of clients in the Electronics industry to scope out the right solution to meet their needs.

Some of the parts we have manufactured include but not limited to:

- Over moulded insert mouldings
- Lens moulding
- Connectors
- Bobbin mouldings
- Potting boxes

Capabilities

We have the capabilities to **injection mould from less than 1g up to 500g in weight** and can offer guidance bespoke to the clients specification.

Typically some of our bespoke plastic parts have been moulded from materials such as Polyester, PPS and Nylon, however we can mould in other materials.
