

QUALITY POLICY

Regina Industries Limited

Regina Industries Limited is committed to operating and continually improving a Quality Management System that meets the requirements of ISO 9001:2015 and supports the strategic direction of the business.

The scope of the Quality Management System covers the manufacture of plastic injection mouldings used within laboratories, food packaging and engineering applications; the manufacture of glass tubing containers for pharmaceutical use such as test tubes, specimen containers and industrial applications; and the preparation of single use laboratory products.

We are committed to:

- Satisfying applicable requirements, including customer, statutory and regulatory requirements
- Enhancing customer satisfaction through the consistent delivery of quality products and services
- Continually improving the effectiveness of our Quality Management System
- Establishing, monitoring and reviewing quality objectives through our management review process

We recognise the importance of understanding our organisational context and the needs and expectations of interested parties. We apply risk-based thinking to identify and address risks and opportunities that may impact product conformity and customer satisfaction.

We are committed to ensuring that our employees are competent, supported through appropriate training and development, and operate within a safe and effective working environment.

The effectiveness and suitability of the Quality Management System will be reviewed at planned intervals, and this policy will be communicated, understood and applied throughout the organisation.

This Quality Policy is reviewed for continuing suitability at Management Review meetings.
